

# True Networked AV Touch Panel Control

Control from your conference room  
to any conference room

## The Difference is IP

Introducing SVSi's N-Touch Wall Controllers - stand-alone, dual-gang IP controllers that send commands to multiple IP clients with the push of a button. Both the N8301 and N8302 have nine programmable tactile buttons with 240 x 320 display. Programming is done individually through the built-in web-server or collectively to multiple units using an N-Command N8000-series controller. Multi-page custom graphics can be created using SVSi's free Panel Builder software, stored internally, and launched at start-up or at the push of a button. The N8302 comes with a capacitive touch display and built-in WiFi and Bluetooth for expanding control to mobile devices.
